WATSON BIO LAB

New centrifuge tube full of new ideas

to achieve high airtightness.

Bigger sealing area performs higher airtightness.

Triple thread screw

Triple thread screw enables easy open/close with less rotation. It also prevents screwing a cap deagonally.

Wide writing space

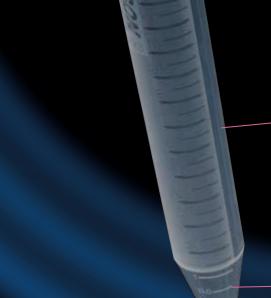

C57BL/6 Spleen 8

It has wide writing space on a cap and the frosted area on the body.

High precision-scale

Graduation is molded so that it does not fade away. Scale is made till 0.5mL

Body: virgin polypropylene Cap: HDPE(not autoclavable) Centrifugal force: refer to the back page. DNase/RNase free Pyrogen test results; Endotoxin level less than 0.05EU/mL

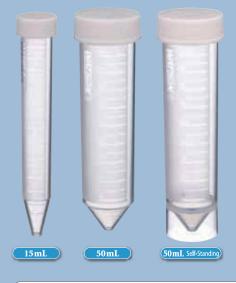

Cat. No.	Item		Packaging
1342 - 050S	50mL centrifuge tube	Sterilized	480 pcs.(24 pcs. x 20 bags)
1332-015S	15mL centrifuge tube	Sterilized	480 pcs.(48 pcs. x 10 bags)
1342-550S	50mL self-standing centrifuge tube	Sterilized	480 pcs.(24 pcs. x 20 bags)

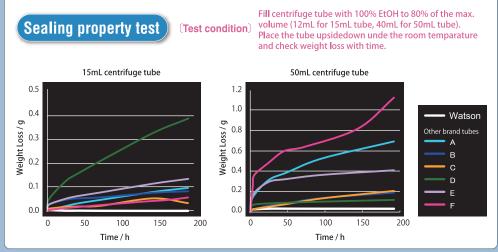

centrifuge tube

Sterlized

Centrifugal tube is sterlized in a closed condition and the inside of the tube maintains sterlized condition after unpackaged.

About Sealing Point

①The protrusions on the cap indicate you the best sealing position when it fits on the groove.

②The upper picture shows too much screwing when the protrusions go over the groove.

*Position ① is recommanded, although ② is no problem.

3The upper picture shows possible loosening the cap and sample leakage when the protrusions come before the groove.

Centrifugal strength test

Test condition

Centrifuge: TOMY MX-305

Temp.: 20°C

Distilled water: 12mL for 15mL CF tube

40mL for 50mL CF tube

Rotor: AR-510-04

Centrifugation time: 5 minutes

[Results]

15mL centrifuge tube 18,000×G(14,100 RPM)

50mL centrifuge tube $18,000 \times G(14,100 \text{ RPM})$
